RANDOMIZING YOUR DATA IN INFRAWORKS FOR A MORE REALISTIC LOOK

Date / Time
Monday, August 7th from 2:00 – 3:00 p.m. CT

Cost
$19.95

Description
When creating a model in Infraworks 360 you want it to look as realistic as possible. This class will walk you through the process to bring in multiple objects of the same type and getting them to look different with the use of some scripting and rules. One of the examples presented will be bringing in a stand of trees and randomizing the species so it displays multiple types of trees instead of just one.

Objectives
- Understand how to bring in multiple objects at once
- Create a rule with a script to pull from multiple styles instead of one
- Create an expression to combine two columns mathematically

Software / Discipline
Infraworks / Infrastructure
